Application: AI Engineer, KICKS / Matas Group (Stockholm, Sweden)

Dear Matas Group Hiring Team,

I am applying for the AI Engineer role in the AI Engineering team. Building chatbots, assistants and AI pipelines that take a business need to production is what I have been doing for the past three years.

As Lead Developer at FlowSpace I built a Python pipeline that scrapes source data and uses the Claude and OpenAI APIs with structured outputs to extract listings, with a human review step before records reach the backend; it added 900+ listings. I built AI agents that answer support queries against live platform data, rapid prototypes with the people who would use them, and integrations with external APIs and CRMs. In Python I have also built a Streamlit crawling and analysis tool using Pandas and SQLite. My GitHub profile is github.com/prab-gupta.

On the gaps: I do not hold a master's degree; my degree is in Philosophy, International Studies and Economics. I have not worked with PySpark, I have not trained ML models, and my Python is scripting, automation and AI API work rather than backend API development, where my experience is in Laravel and Next.js. I do not speak Swedish, Danish, Norwegian or Finnish.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Stockholm. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
