Application: AI Engineer, Knowit (Turku, Finland)

Dear Knowit Hiring Team,

I am applying for the AI Engineer role in your Data & Analytics crew. Building LLM-powered applications at the application layer and connecting them to the systems a business already runs is the work I enjoy most.

As Lead Developer at FlowSpace I built a Python pipeline that scrapes web data, uses the Claude and OpenAI APIs with structured outputs for extraction, and pushes records through human review to an API, adding 900+ listings. I built AI agents that work against live data and streamline customer support, a listing sync pipeline across 9 operators with fuzzy matching, staged approval and dry-run safety, and end-to-end integrations with the OfficeRnD and Nexudus APIs (OAuth2, webhooks). I work with RAG, function calling, MCP and agent orchestration, write TypeScript, React and Python, and use Claude Code for AI-assisted development while reviewing what it produces.

On the gaps: the role is mid-senior and I have about three years of experience. My Python is scripting, automation and AI APIs rather than maintainable backends; I have not built with FastAPI, Django or async Python. I have no Azure, Azure OpenAI or AI Foundry experience, have not used LangGraph or Semantic Kernel, and have not set up formal evaluation and monitoring for AI in production. My degree is in Philosophy, International Studies and Economics. I do not speak Finnish or Swedish; I work in English (C1).

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Turku or Helsinki. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
