Application: AI Engineer (AI Enablement), Legora (Stockholm, Sweden)

Dear Legora Hiring Team,

I am applying for the AI Engineer role in AI Enablement. Building internal agents and tools that people actually choose to use, with humans approving what agents propose, is close to the work I have been doing for the past three years.

As Lead Developer at FlowSpace I built an LLM pipeline with the Claude and OpenAI APIs where agents propose structured records and a human review step decides what reaches the backend; it added 900+ listings. I built AI agents that answer support queries against live platform data, workflow automations in n8n and Make for lead routing and data sync, and integrations with external APIs and CRMs, working directly with the internal team and an external agency who used them. I work in TypeScript with Claude Code and MCP, and I led a live migration off a legacy stack to Next.js and Laravel while the platform grew from 2,000 to 4,500+ users.

On the gaps: I have not owned infrastructure, Terraform or cloud providers, and I have not designed access and permission models or formal evaluation and monitoring for LLM systems; my output checks have been human review steps. I have no legal-domain experience. My degree is in Philosophy, International Studies and Economics, not computer science. I do not speak Swedish.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately, and open to relocating to Stockholm. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
