Application: AI Engineer, Nordea (Helsinki, Finland)

Dear Nordea Hiring Team,

I am applying for the AI Engineer role in the AI & Change team. Building AI agents and automation with business users, and acting as their technical and quality assurance partner, is close to how I have worked for the past three years.

As Lead Developer at FlowSpace I built a Python pipeline that uses the Claude and OpenAI APIs with structured outputs to extract data, with a human review step before records reach the backend; it added 900+ listings. I built AI agents that answer support queries against live platform data, workflow automations in n8n and Make, and API integrations with OAuth2 and webhooks, and I work with MCP. I documented product and business logic with developers and an external agency, and earlier I did unit testing and QA at Clubee. I hold the Microsoft Copilot Studio Agent Academy, Introduction to building AI agents and Power Automate certifications.

On the gaps, which are significant: I do not have 3+ years as a Power Platform developer; my Copilot Studio and Power Automate knowledge comes from certifications rather than production work. I have no Azure or AWS experience (including Bedrock and SageMaker), no Java, no production classical ML or MLOps, and no Docker, Kubernetes, Terraform or Jenkins in production. My AI testing has been manual review. I do not speak Finnish or Danish, and my degree is in Philosophy, International Studies and Economics, not computer science.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Helsinki. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
