Application: GenAI Developer, Redeploy (Stockholm, Sweden)

Dear Redeploy Hiring Team,

I am applying for the GenAI Developer role. Taking a business problem from the people who have it to a working AI system with an interface in front of users is the part of my work I enjoy most.

As Lead Developer at FlowSpace I built a Python pipeline that scrapes source data and uses the Claude and OpenAI APIs with structured outputs to extract listings, with a human review step deciding what reaches the backend; it added 900+ listings. I built AI agents that answer support queries against live platform data, built rapid prototypes with the people who would use them, and worked between developers and an external agency on a live migration off a legacy stack to Next.js and Laravel while the platform grew from 2,000 to 4,500+ users. I build front ends in React and Next.js, and I have built a Streamlit tool in Python.

On the gaps: my RAG work has not gone deep into chunking strategies, embedding models, hybrid retrieval, reranking or retrieval evaluation in production. I have not used LangChain, LlamaIndex, AutoGen or CrewAI, built multi-agent systems, or worked with Azure AI or Azure OpenAI. My Python is scripting, automation and AI API work rather than strong software engineering in Python, and I have no consulting background or regulated-industry experience. I do not speak Swedish. My degree is in Philosophy, International Studies and Economics, not computer science.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Stockholm. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
