Application: RPA Developer, Syone (Porto, Portugal)

Dear Syone Hiring Team,

I am applying for the RPA Developer role on your banking project. Analysing business processes, automating them and integrating the automation with existing applications, APIs and databases is what I have worked on for the past three years.

As Lead Developer at FlowSpace I built n8n and Make workflows for lead routing, data sync and support queries and integrated external APIs (OfficeRnD and Nexudus) end to end for automated bookings. I wrote Python scripts for automation and AI API calls, including a listing sync pipeline across 9 operators with staged approval and dry-run safety. I have also used Playwright for browser automation and crawling in a Python SEO crawler. At Clubee I did unit testing and quality assurance of new features. I have worked with PostgreSQL, MySQL and SQLite, and use Git, GitHub and Jira. I hold the Microsoft Power Automate and Tray.ai Build Practitioner certifications.

On the gaps, which are significant for this role: I have not worked with a dedicated RPA platform such as UiPath, Automation Anywhere or Blue Prism, and my automation experience is with workflow tools, APIs and browser automation rather than desktop RPA. I have not worked in banking or financial services, and I have not set up CI/CD pipelines. My degree is in Philosophy, International Studies and Economics. I do not speak Portuguese; I work in English (C1).

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately, and open to relocating to Porto. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
