Hiring Team – Digital Finance IT & AI Data Enablement
Xenon7
Italy (Remote)
Role: AI Data Enablement Engineer (Full-Time Independent Contractor)

Dear Hiring Team,

I am writing to express my strong enthusiasm for the AI Data Enablement Engineer position at Xenon7 supporting Digital Finance IT. Your mission to build an AI-enablement layer on top of enterprise data platforms—allowing business stakeholders across Finance to interrogate governed datasets reliably in natural language—directly aligns with my technical focus and professional experience over the last three years.

As an engineer specializing in data foundations and production AI enablement, my technical competencies map directly to your mandate:

Semantic Foundations & Governed Data Products: I design and implement semantic layers, KPI hierarchies, and structured business glossaries that bridge low-level data schemas and end-user business intent. I specialize in deploying and tuning conversational spaces (such as Databricks Genie and Unity Catalog governed assets) to ensure natural-language querying produces deterministic, accurate business metrics without requiring non-technical users to write SQL.

Production RAG & Governed Conversational Analytics: I build resilient RAG pipelines and conversational analytics applications (using Streamlit, FastAPI, and vector stores) grounded directly in enterprise datasets. I enforce strict data governance standards—including role-based access control (RBAC), row- and column-level security filtering, PII masking, and comprehensive auditability—ensuring compliant query handling across regulated environments.

Data Engineering Pipelines & Platform Optimization: I develop robust ETL/ELT data pipelines using Python, PySpark, dbt, SQL, and Apache Airflow. I systematically optimize cost and compute performance across both data warehouses (cluster sizing, caching, query plans) and LLM interactions (token budgeting, semantic caching, model routing).

I am an EU Permanent Resident based in Venice, Italy with full legal authorization to work, fully registered with an Italian Partita IVA, and immediately available for this full-time independent contractor role under your compensation terms. I look forward to discussing how my data platform engineering background can accelerate Xenon7's AI enablement roadmap.

Sincerely,
Prabhavit Gupta
