Professional Services Hiring Team – JetBrains Central
JetBrains
Amsterdam, Netherlands / Madrid, Spain / Berlin, Germany / Prague, Czech Republic
Role: Staff Forward Deployed Engineer – AI-Native Software Development

Dear Hiring Team,

I am writing to express my strong enthusiasm for the Staff Forward Deployed Engineer position for JetBrains Central within Professional Services. As an engineer who relies on JetBrains tools daily, I am thrilled by your launch of JetBrains Central as the unified platform for agent-driven software development. The challenge of enabling enterprise engineering teams to transition from ad-hoc AI experiments to governed, scalable AI-native development directly mirrors my engineering focus over the past three years.

As a Forward Deployed Engineer who bridges architectural advisory with hands-on systems implementation, my experience maps directly to your core requirements:

Agent Execution Infrastructure & MCP Runtimes: I have extensive experience building and deploying autonomous agent execution runtimes and tool layers using Model Context Protocol (MCP), Python (AsyncIO), and LangGraph. I architect shared semantic context layers across repositories, ensuring agents can reliably access project knowledge while enforcing sandboxed execution and deterministic boundaries across enterprise CI/CD systems.

Enterprise AI Governance, Observability & Cost Control: In production, I integrate distributed tracing with Langfuse and automated evaluation harnesses with DeepEval and RAGAS. I implement policy enforcement, identity and access management, and granular cost attribution across multi-model providers, providing technical leadership with complete visibility into agent productivity, quality, and token spend.

Consultant Mindset & Customer Delivery: I thrive in customer-facing engagements. I am equally comfortable explaining the strategic architecture of agentic adoption to enterprise CTOs as I am pair-programming with developer platform engineers to debug automated pipelines. I design repeatable implementation playbooks and training frameworks that empower internal teams and consulting partners to execute independently.

I hold an EU Long-Term Permanent Residence Permit (Permesso di Soggiorno UE a Tempo Indeterminato, Italy), granting unrestricted legal right to live and work across the European Union (including the Netherlands, Spain, Germany, and the Czech Republic) without visa sponsorship. I communicate fluently in English (C1/C2) and am available immediately for hybrid relocation to Madrid, Amsterdam, or Prague.

I welcome the opportunity to discuss how my hands-on experience deploying agent runtimes, governance frameworks, and developer tool integrations can support JetBrains Central's mission.

Sincerely,

Prabhavit Gupta
