Application: AI Engineer, Oxylabs

Dear Hiring Team,

I am applying for the AI Engineer role in the AI Integrations squad. Sitting with a team, finding what slows them down and shipping an AI-based tool they actually use, is the work I have done for three years.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, and an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets. The pipeline mixes deterministic checks with LLM calls and a review step before anything reaches the backend. I work with LLM APIs and prompt engineering every week, use Claude Code to build, and gathered requirements directly from the sales and operations team.

On the gaps: my Python is at working level, and most of my shipped code is TypeScript and Laravel, so I do not have solid production experience in Python or Go. I have not owned Docker deployments or CI/CD pipelines, and I have not built observability with metrics, logging and SLIs. I have not used Kubernetes, Terraform or Spotify Backstage. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Vilnius for the hybrid role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
