Application: Solutions Architect (Software Implementation), project44, Amsterdam

Dear Hiring Team,

I am applying for the Solutions Architect (Software Implementation) role in Amsterdam. Getting a customer's integration designed, tested and live, and staying with it until it is stable, is the part of my work I do best.

At FlowSpace I integrated the OfficeRnD and Nexudus APIs with OAuth and webhooks, and led a live migration off a legacy stack: I mapped the data model, chose the migration path per entity (API or CSV) and drove the cutover while the platform grew from 2,000 to 4,500+ users. I worked directly with customers, the sales and operations team and an external agency, tracked work in Jira and ClickUp, troubleshot with Postman, and documented product and business logic with the developer team. My Italian is at beginner level.

On the gaps: I have no supply chain, transportation or logistics background, and I have not worked with TMS or ERP systems. I have not used Confluence, Observe, Zendesk or Rocketlane. I have not held a Solutions Architect title, and my work has been delivery rather than pre-sales. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Amsterdam for the on-site role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
