Summary

I own customer-facing engineering projects end to end, from scoping through production. At FlowSpace I built custom integrations for workspace providers, developed AI agents that process unstructured documents (PDFs, web pages, photos, spreadsheets) into structured records via LLM, and migrated the entire platform to Next.js and Laravel while it stayed live. I write production Python and TypeScript, communicate clearly with both technical teams and business stakeholders, and thrive in fast-moving environments where the scope shifts with each customer. Willing to relocate to New York, available immediately.
