Dear Xebia team,

I am applying for the Senior AI Consultant role. I am based in Venice and open to remote work from the EU or to relocating to Poland. I hold an EU Long Term Residence Permit, so no sponsorship is needed, and I am available immediately.

My work is hands-on AI-assisted engineering. As Lead Developer at FlowSpace (Mar 2024 - Aug 2026) I built with Claude Code and AI agents, and built an AI listing pipeline in Python: web scraping, extraction with the Claude and OpenAI APIs into structured records, a human review step, then a push to the platform through its API. It produced 900+ records. I also built n8n and Make workflows for lead routing, data sync and support, and streamlined customer support with AI agents.

I oversaw the migration of the platform to Next.JS and Laravel while it scaled from 2,000 to 4,500+ users, and built the OfficeRnD and Nexudus integrations (OAuth2, webhooks, booking automation). I collaborated with the developers on product logic and business logic documentation, and facilitated communication between our internal team and an external agency. At Clubee I did unit testing and QA on new features. I work with MCP, which you list as a plus.

Gaps, plainly: this is a senior title and I have about 3 years of professional experience. I have not run formal workshops, training programs or client consulting engagements, and I have not worked with LLMOps platforms, DORA metrics or AI adoption maturity models. I have no AWS, Azure or cloud administration experience.

I would welcome the chance to show you how I use AI tools across building, testing and documenting software.

Kind regards,
Prabhavit Gupta
