Application: Engineer II (AI Enablement), Kpler (Paris or Athens)

Dear Kpler Hiring Team,

I am applying for the Engineer II role in your AI Enablement crew. Building AI agents for internal teams, keeping their knowledge sources current and integrating them safely with company systems is close to the work I have done at FlowSpace.

As Lead Developer at FlowSpace I built AI agents that streamline customer support and work against live data, and a Python pipeline that scrapes web content, uses the Claude and OpenAI APIs with structured outputs for extraction, and pushes records through human review to an API, adding 900+ listings. I built a listing sync pipeline across 9 operators with fuzzy matching, staged approval and dry-run safety, integrated the OfficeRnD and Nexudus APIs end to end (OAuth2, webhooks), and worked on the migration to Next.js and Laravel while users grew from 2,000 to 4,500+. I write TypeScript and Python, work with RAG, function calling and MCP, and have used PostgreSQL, MySQL and SQLite.

On the gaps: I have about three years of experience. I have no cloud infrastructure experience (AWS or otherwise), have not run Docker or Kubernetes in production, and have not built CI/CD pipelines. I have not set up formal LLM evaluation or observability, or taken part in on-call incident response. My degree is in Philosophy, International Studies and Economics, not computer science. I do not speak French or Greek; I work in English (C1).

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Paris or Athens. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
