Dear Cresta Hiring Team,

As an AI Engineer who has spent the last two years embedding LLM pipelines directly into live customer workflows, I am writing to express my strong interest in the Senior Forward Deployed Engineer (AI Agent) role in Germany. Cresta's mission to supercharge customer-facing teams with AI aligns perfectly with my background in translating complex business requirements into robust, agentic software. While currently based in Italy, I am highly motivated to relocate to Germany for this opportunity.

At FlowSpace, I led the technical delivery and architecture of our core AI features, working closely with business stakeholders. I built a multi-agent system using TypeScript, Claude APIs, and n8n that ingested unstructured client brochures and drafted formatted workspace listings with human-in-the-loop escalation.

Here is how my experience maps to the FDE role at Cresta:

- **Agentic AI & LLMs:** Deployed RAG-based support agents against live production databases and architected custom CV-parsing extraction pipelines for enterprise clients.
- **Full-Stack Integrations:** Directed the end-to-end migration of a marketplace to Next.js and Laravel, supporting 4,500+ active users without downtime.
- **Client-Facing Execution:** Acted as the technical bridge at Urlink and Get2Germany, designing and shipping bespoke automations and integrations directly based on client needs.

I thrive in the intersection of product engineering and customer success, where the ability to context-switch between technical architecture and business strategy is critical. I would welcome the chance to bring my expertise in TypeScript, Python, and AI orchestration to Cresta's elite FDE team.

I look forward to discussing how I can contribute to your deployments.

Kind regards,

Prabhavit Gupta
