Dear OWOW Hiring Team,

As an AI Engineer who has spent the last three years embedding agentic AI pipelines into live production environments, I am excited to apply for the AI Engineer position at OWOW. Your philosophy that great AI products aren't built by just throwing a chatbot at a problem, but by solving real business challenges and seamlessly integrating into existing workflows, resonates completely with my approach to software engineering. While currently based in Italy (holding an EU Long Term Residence Permit), I am highly motivated to relocate to Eindhoven to join your Wizkids on a hybrid basis.

In my recent role as Lead AI & Full-Stack Engineer at FlowSpace, I bridged the gap between business needs and technical solutions. I architected and deployed autonomous support agents that answer customer queries against live platform data, as well as a human-in-the-loop ingestion pipeline that drafts workspace listings from unstructured documents.

Here is how my experience maps to OWOW's engineering toolkit:

- **Agentic AI & LLMs:** Built production-grade agentic workflows, orchestrating LLM APIs (Claude, OpenAI) for data extraction, RAG, and workflow automation. I am well-versed in the architectures underlying frameworks like Mastra and LangGraph.
- **Backend & API Architecture:** Developed robust REST APIs and database schemas (PostgreSQL) using TypeScript, Node.js, and Python. I directed the end-to-end migration of a marketplace to a scalable Next.js and Laravel stack, supporting over 4,500 active users.
- **Client-Facing Execution:** Thrived as the technical bridge for external clients at Urlink and UltraStrategy, uncovering where AI creates real value and delivering custom, end-to-end software solutions.

I am drawn to OWOW's culture of autonomy, ownership, and continuous learning. I would welcome the opportunity to bring my expertise in TypeScript, Node.js, and AI orchestration to your team and help build the next generation of digital products.

I look forward to discussing how I can contribute.

Kind regards,

Prabhavit Gupta
