Dear Pillar Hiring Team,

I am writing to express my strong interest in the AI Engineer role in Milan or Barcelona. Pillar's mission to build the financial operating system for construction by bringing AI, automation, and modern software to a massive industry strongly resonates with me. As a pragmatic, product-minded engineer who has built production-grade LLM applications and agentic workflows, I am excited by the opportunity to turn LLMs into reliable, measurable product features and move quickly beyond mere prototypes.

Operating at the intersection of AI pipelines and product engineering requires not just prompt design, but understanding how to integrate multi-step reasoning securely into a modern stack. At FlowSpace, I led the platform migration to a Next.js and Supabase stack while spearheading the development of custom LLM pipelines that transformed messy, unstructured real-world data into validated production databases.

My background aligns directly with Pillar's stack and the AI orchestration challenges you are tackling:

- **Agentic Workflows & Document Extraction:** At FlowSpace and UltraStrategy, I built end-to-end AI document extraction pipelines orchestrating multi-step LLM agents with tool use and structured outputs to securely parse and validate complex data (like invoices and reports) into production databases. I thrive on building human-in-the-loop workflows with robust schema validation.
- **RAG & AI-Native Features:** I have hands-on experience developing semantic search pipelines, leveraging embeddings and vector databases to optimize context retrieval. I understand the trade-offs in building reliable systems using orchestrators like Mastra and LangChain, focusing on observability and evaluation.
- **Product Ownership in Startups:** I thrive in high-agency, agile environments. At FlowSpace, I scaled the user base to over 4,500 active users, owning the product features from ambiguity to working software. I am accustomed to working across the TypeScript and PostgreSQL stack, making pragmatic technical decisions to ship real customer value.

Based in Italy with full professional English proficiency, I am completely open to working in Milan or relocating to Barcelona. I use AI as a native part of my own engineering workflow, and I am ready to get my hands dirty bridging backend logic with AI features alongside your squad.

I would welcome the opportunity to discuss how my execution-focused mindset and startup DNA can contribute to Pillar's scaling engineering team.

I look forward to hearing from you.

Kind regards,

Prabhavit Gupta
