Hiring Team
Primer.ai

Re: Application for Senior Forward Deployed Engineer, Germany

Dear Hiring Team,

I am writing to express my strong interest in the Senior Forward Deployed Engineer role at Primer.ai. As a technical leader with a track record of bridging the gap between product engineering and customer success, I am excited by Primer.ai's mission to deploy robust AI solutions for high-stakes environments. My background in building custom integrations and operating directly in client environments aligns perfectly with the challenges this role presents.

In my recent work as Lead Developer at FlowSpace.co, I acted as the primary technical bridge for custom integrations, directly translating ambiguous customer requirements into production-ready software. I designed and deployed a production AI data pipeline using Python and advanced LLM APIs, handling diverse data formats seamlessly. Moreover, I led the end-to-end migration of our platform infrastructure, ensuring stability and performance while scaling our user base. My approach focuses on quickly prototyping solutions, resolving production issues, and ensuring that our tools natively integrate with existing customer workflows.

While at UltraStrategy, I engaged deeply with external stakeholders to build custom automation and AI pipelines, acting as a forward-deployed engineer by troubleshooting deployments in real-time and feeding feedback directly back to our core development cycles. I thrive in environments where deep technical ability and strong business communication are equally crucial, and I am comfortable writing production code in Python or architecting complex integrations using tools like Claude Code to accelerate development.

I understand that Primer.ai partners with national security clients, and I bring a rigorous approach to system architecture and data privacy. Although based in Italy, I am highly experienced in remote delivery for European clients (including Germany) and am fully prepared to support Primer.ai's deployment missions across the region.

Thank you for considering my application. I would welcome the opportunity to discuss how my engineering background and customer-focused execution can contribute to the success of Primer.ai's deployments.

Sincerely,

Prabhavit Gupta
