Hiring Team
Greenvolt Group
Lisbon, Portugal

Subject: Application for AI & Automation Developer

Dear Hiring Team,

I am writing to apply for the AI & Automation Developer position at Greenvolt Group. With my background in building enterprise AI agents, intelligent workflows, and cross-system integrations, I am drawn to Greenvolt's mission to eliminate manual work and scale digital capabilities. My hands-on experience aligns closely with your focus on the Microsoft Power Platform and cloud-based automations.

In my recent work as a Full-Stack & Automation Engineer for FlowSpace, I designed and deployed an AI-powered pipeline using automation platforms and LLMs that processed unstructured data into structured marketplace listings, successfully automating over 900 entries. I have built and supported intelligent support agents, integrating them deeply with live platform data, while implementing confidence-based human handoffs. Additionally, I have consistently created robust REST API integrations across various enterprise applications and CRM tools.

I hold certifications in Microsoft Copilot Studio and Microsoft Power Automate, equipping me with the specific knowledge to leverage Dataverse, Copilot, and cloud-based RPA technologies to streamline business operations. Although my formal degree is in Economics and International Studies, my technical foundation is built on years of active, production-grade development in Python, TypeScript, and Azure-adjacent API integrations, delivering reliable technical solutions that translate business requirements into scalable workflows.

I am excited by the opportunity to bring my passion for automation and innovation to Greenvolt Group, helping your business teams operate more efficiently. As an EU resident based in Italy, I am fully available for a remote or hybrid arrangement.

Thank you for your time and consideration. I look forward to discussing how my skills in AI and system integration can contribute to Greenvolt's continued growth.

Sincerely,

Prabhavit Gupta
