Hiring Manager
49x
Budapest, Hungary

Dear Hiring Manager,

I am writing to express my strong interest in the Forward Deployed Engineer position at 49x. With my background in developing custom solutions and integrating complex products into customer infrastructures, I am drawn to 49x's approach to delivering high-impact solutions directly to clients.

My technical stack closely aligns with the requirements of an FDE role. I have extensive experience building scalable solutions using Python, TypeScript, and SQL, and integrating REST/GraphQL APIs. My recent work has increasingly focused on LLM APIs and AI orchestration frameworks, deploying these technologies on cloud platforms like AWS and GCP. This allows me to bridge the gap between product engineering and customer success, translating business requirements into robust, working software.

Beyond coding, I understand that a successful Forward Deployed Engineer must operate seamlessly in client environments. I excel at context-switching between deep technical execution and strategic business conversations, ensuring that customer teams are well-trained and that product insights are effectively fed back to the core engineering organization.

I am highly adaptable, comfortable working remotely or hybrid, and thrive in elite engineering environments where shipping custom solutions rapidly is the standard. I look forward to the opportunity to bring my blend of technical depth and client-facing skills to 49x.

Thank you for considering my application. I welcome the opportunity to discuss how I can contribute to your team.

Sincerely,
Prabhavit Gupta
