Hiring Manager
Auction Technology Group (ATG)

Subject: Application for Senior Backend Software Engineer

Dear Hiring Manager,

I am writing to express my interest in the Senior Backend Software Engineer position at Auction Technology Group. Your mission to modernize the global auction industry by building high-performance, globally scalable platforms aligns strongly with my experience in engineering robust marketplace architectures. I am eager to contribute to processing millions of auction events and bids across your international marketplaces.

In my recent role as Lead Developer for FlowSpace.co, I successfully architected and scaled backend systems and RESTful APIs to support a live marketplace with over 4,500 active users. By engineering complex API integrations and automated pipelines, I ensured robust data models and optimized application performance—core responsibilities you emphasize at ATG. While my primary production experience to date has centered on TypeScript, Python, and scalable backend services, I have strong foundational knowledge of distributed systems and am deeply committed to ramping up quickly in Go and contributing to your microservices ecosystem.

I am particularly drawn to ATG's data-driven approach and focus on high availability. At Clubee.com, I focused heavily on system reliability and technical debt reduction through comprehensive unit testing and proactive monitoring. I bring a customer-centric mindset, comfort working cross-functionally across product and engineering teams, and a proven track record of prioritizing tasks effectively in fast-paced environments.

I am excited about the opportunity to join ATG and help drive the next phase of your digital transformation in the auction space. Thank you for your time and consideration. I would welcome the chance to discuss how my backend expertise and drive for continuous improvement can add value to your team.

Sincerely,
Prabhavit Gupta
