Accenture Baltics
Riga, Latvia

Dear Accenture Hiring Team,

I am writing to apply for the GenAI Forward deployed Engineer position at Accenture Baltics. Having spent the last several years embedding directly into customer ecosystems to architect and deploy AI-driven applications using modern JavaScript and LLMs, I strongly align with Accenture's mission to transform software development through AI tools like GitHub Copilot and Claude.

In my role as a Full-Stack & AI Engineer at FlowSpace.co, I co-led the migration of a live marketplace to a robust Next.js backend, scaling our active user base from 2,000 to over 4,500. Transitioning into AI engineering, I champion a delivery model where GenAI accelerates the SDLC. Here is how my experience directly maps to your requirements:

- **GenAI Transformation:** Built and shipped production AI data pipelines orchestrating multi-step agents (Claude, OpenAI) with Model Context Protocol (MCP) and RAG to ingest documents across various formats, enabling rapid prototyping and deployment.
- **Modern Web Architecture:** Engineered scalable frontend and backend systems using TypeScript, React, and Node.js, ensuring secure and performant integration with legacy APIs and CRMs.
- **Client-Facing Technical Leadership:** Led development teams and worked directly with clients to translate ambiguous business goals into scalable technical solutions, building trust and maintaining velocity from architecture planning to CI/CD release.

What excites me most about Accenture Baltics is the opportunity to work with Fortune 500 companies and drive GenAI adoption not just as an afterthought, but as a default component of the SDLC. I am comfortable bridging the gap between technical teams and non-technical stakeholders, and I am fully open to traveling and working on-site to ensure seamless project delivery.

I hold an EU work permit and am available to join your team within your timeframe. I look forward to discussing how my hands-on technical direction and experience with GenAI tools can deliver rapid value to your clients.

Kind regards,

Prabhavit Gupta
