Hiring Manager
Accenture Brasil

Re: Desenvolvedor(a) Backend Java Microserviços + AWS

Dear Hiring Team at Accenture Brasil,

I am writing to express my strong interest in the Backend Java Developer position at Accenture Brasil. With extensive experience building robust, scalable microservices using Java and Spring Boot, combined with deep expertise in AWS cloud infrastructure, I am excited about the opportunity to contribute to Accenture's digital transformation initiatives for global clients.

In my recent roles as a Senior Backend Developer, I have successfully designed and migrated monolithic systems into modern, event-driven microservices architectures. My hands-on experience with AWS services—including Lambda, ECS, S3, SQS, API Gateway, and DynamoDB—aligns perfectly with the requirements of this position. I am well-versed in leveraging these tools alongside Kafka and Docker/Kubernetes to build highly available and performant solutions.

Furthermore, having worked extensively in remote and hybrid environments with international teams, my advanced English communication skills enable me to collaborate seamlessly with stakeholders and cross-functional teams worldwide. I thrive in agile environments that prioritize clean code, automated testing, and continuous integration/continuous deployment (CI/CD) practices.

I am particularly drawn to Accenture because of its global impact and commitment to technological innovation. I would welcome the opportunity to bring my backend engineering expertise to your team and help deliver exceptional cloud solutions for your clients.

Thank you for considering my application. I look forward to the possibility of discussing how my technical background and global experience can add value to Accenture.

Sincerely,

Prabhavit Gupta
