Hiring Team
Accenture na Slovensku
Role: Senior Integration Low-Code Developer
Ref: R00303209 (LinkedIn: 4328019564)

Dear Hiring Team,

I am writing to express my strong interest in the Senior Integration Low-Code Developer position at Accenture na Slovensku. With over 3 years of hands-on experience designing and operating event-driven automation pipelines, enterprise API synchronizations, and data integration platforms across European organizations, I specialize in combining low-code orchestration with rigorous software engineering standards. Accenture's leadership in building enterprise digital cores and delivering modern integration architectures makes this role an ideal match for my technical background.

Throughout my engineering work, I have focused on solving distributed data challenges, architecting resilient low-code workflows, and ensuring platform reliability. My experience maps directly to your core objectives:

Low-Code Orchestration & Platform Expertise: I hold certifications in Microsoft Power Automate, Microsoft Copilot Studio, and Tray.AI (Build Practitioner), alongside extensive production delivery using n8n and Make. At FlowSpace, I designed and deployed an automated multi-format ingestion and integration pipeline that processes heterogeneous documents (PDFs, spreadsheets, images, web data) into strictly validated schemas across 900+ entities. I also authored the open-source pipeline llm-doc-parser, demonstrating schema-enforced validation and automated error recovery.

Enterprise API Integration & Platform Migration: I possess substantial experience establishing bidirectional REST API and webhook integrations across distributed platforms, including OfficeRnD, Nexudus, Google APIs, and enterprise CRMs. As Lead Developer at FlowSpace, I spearheaded the platform and database migration off a legacy stack onto a structured Next.js and Laravel (PostgreSQL) architecture, mapping relational schemas entity-by-entity and scaling from 2,000 to 4,500+ users with zero downtime.

Engineering Rigor, Testing & Agile Collaboration: Delivering stable integration platforms requires strong architectural discipline. I implement automated end-to-end testing with Playwright, contract testing with Postman, and structured monitoring to maintain high system availability. Having collaborated across 8 European organizations in the UK, France, Germany, Luxembourg, and Italy, I thrive in international agile environments, collaborating closely with enterprise architects, product owners, and junior engineers to enforce high code quality and smooth UAT delivery.

Holding an Italian EU Long Term Residence Permit, I am fully authorized to work in Slovakia and across the EU without visa sponsorship, and I am available to start immediately. I would welcome the opportunity to discuss how my technical expertise in low-code orchestration and API integration can deliver immediate value to Accenture and your clients.

Kind regards,

Prabhavit Gupta
