Hiring Manager
Air Products
Lehigh Valley, PA

Dear Hiring Manager,

I am writing to express my strong interest in the Customer Engineering Maintenance & Service Technician position at Air Products. While my professional background lies in software and systems engineering rather than traditional mechanical trades, the core of my career is built on the exact competencies this role demands: rigorous system diagnostics, rapid troubleshooting of complex logic, and uncompromising operational reliability.

In my work as a Systems Engineer at FlowSpace and Clubee, I have operated independently in high-stakes environments, diagnosing root-cause failures in complex architectures and ensuring continuous system uptime. Whether tracing a fault in a distributed software network or learning to trace voltage on an instrumentation circuit, the underlying diagnostic mindset is identical. I am highly adept at reading technical diagrams, tracing logic loops, and collaborating with remote engineering teams to execute precise repairs.

I understand that this role involves significant hands-on mechanical and electrical workincluding servicing cryogenic systems, working with 480V circuits, and interpreting P&IDs. I am a dedicated self-starter with a proven track record of rapidly mastering new technical domains. I am eager to apply my strong learning aptitude toward cross-training in mechanical repair, LOTO safety protocols, and industrial gas systems. I am fully prepared for the physical demands of the role, year-round outdoor work, and the 24/7 call-out schedule. Furthermore, I am open to relocating to the Lehigh Valley, PA area to support the 250-mile travel radius.

I admire Air Products' unwavering commitment to safety and environmental stewardship, and I would welcome the opportunity to bring my analytical rigor and dedication to your Customer Engineering team. Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
