Hiring Team, Generative AI
Allitude S.p.A. (Gruppo Cassa Centrale)
Via Lunelli 48 / Via Segantini 16
38121 Trento, Italy

Dear Allitude Hiring Team,

I am writing to express my strong interest in the GenAI Engineer position at Allitude. As an engineer specializing in Generative AI solutions, agentic architectures, and full-stack software development based in Venice, I have followed Allitude's role as the technological engine of Gruppo Cassa Centrale. Your mission to develop and industrialize Generative AI solutions for cooperative banking, spanning agentic architectures, RAG patterns, document automation, and semantic knowledge retrieval, aligns directly with what I build and ship in production.

Over the past three years across European technology environments, I have focused on bridging foundational generative models with enterprise software and automated pipelines. At FlowSpace, I architected and operated an automated document ingestion pipeline using TypeScript, Claude API, and n8n that processes unstructured brochures across multiple formats (PDFs, spreadsheets, images, and web content) into verified, structured listings with human-in-the-loop review, drafting over 900 production listings. I also deployed conversational customer support agents operating directly against live database records, incorporating confidence scoring and automated escalation to human staff when uncertainty is detected. These implementations directly mirror Allitude's priorities in document automation, intelligent assistants, and semantic search for banking workflows.

In parallel with AI engineering, I bring rigorous software development and API integration discipline. At FlowSpace, I led the platform migration off a legacy stack to a modern Next.js and Laravel architecture, scaling from 2,000 to over 4,500 active users while maintaining continuous uptime. I integrated third-party REST APIs and webhooks (OfficeRnD, Nexudus) with robust schema validation, error handling, and automated data synchronization. My daily workflow combines Python, TypeScript, and AI-assisted development tools like Claude Code, allowing me to take initiatives rapidly from exploratory proof-of-concept (POC) to industrialized, production-grade delivery with automated testing (Playwright, unit testing).

Based in Venice, I am well positioned for hybrid collaboration with your teams in Trento or Bologna, with direct train connections allowing regular on-site presence. I hold an Italian European Long-Term Residence Permit (granting full EU work authorization in Italy without visa sponsorship), graduated with a BA from Ca' Foscari University of Venice, and communicate fluently in English (professional C2) while actively improving my conversational Italian for day-to-day team collaboration.

I would welcome the opportunity to discuss how my practical experience in agentic workflows, RAG systems, and production GenAI engineering can contribute to Allitude and the digital transformation of Gruppo Cassa Centrale.

Sincerely,

Prabhavit Gupta

I hereby authorize the processing of my personal data contained in this document for the purposes of recruitment and selection in compliance with the European General Data Protection Regulation (EU Regulation 2016/679) and Italian Legislative Decree 196/2003, as modified by Legislative Decree 101/2018.
