Hiring Team: Forward Deployed Engineering
Analog Devices
Role: Senior Principal Forward Deployed Engineer (LinkedIn Ref: 4457754997)

Dear Analog Devices Hiring Team,

I am writing to express my strong interest in the Senior Principal Forward Deployed Engineer position at Analog Devices. Analog Devices stands at the forefront of bridging the physical and digital domains, creating intelligent sensing, signal processing, and edge AI technologies that transform industries. As enterprise customers increasingly look to deploy AI directly into complex real-world environments, the forward deployed engineer serves as the vital bridge solving the last-mile challenge. Combining a rigorous background in production software, automated data pipelines, agentic AI workflows, and customer-embedded delivery, I am eager to help ADI's strategic clients unlock the full value of your AI and edge portfolio.

Throughout my engineering engagements across European technology organizations, I have operated at the intersection of technical consulting, systems architecture, and hands-on coding:

Customer Embedding & Solutions Architecture: I excel at stepping into complex, ambiguous client environments, diagnosing core operational bottlenecks, and architecting resilient technical solutions. At FlowSpace, I worked directly with external partners and platform stakeholders to engineer bidirectional enterprise integrations across booking systems (OfficeRnD, Nexudus) and CRM pipelines, handling rate limits, webhook resilience, and complex payload transformations across service boundaries.

Production AI, Data Pipelines & Reusable Assets: Bridging proprietary platforms with client systems requires robust data engineering. I designed and shipped an automated AI ingestion pipeline (Claude API, TypeScript, n8n) extracting structured records from heterogeneous brochures (PDF, image, spreadsheet, web) with human-in-the-loop review, drafting over 900 production listings. I authored github.com/prab-gupta/llm-doc-parser, an open-source tool demonstrating strict schema validation and deterministic recovery. Furthermore, I leverage Claude Code daily as my primary driver to rapidly prototype architectures, write test scaffolding, and generate reusable, production-grade technical assets.

Enterprise Delivery & System Reliability: In production environments, stability is paramount. At FlowSpace, I deployed customer-facing support AI agents querying live operational databases with confidence scoring and automated human escalation. I also spearheaded the core data and platform migration off a legacy stack onto a maintainable Next.js and Laravel (PostgreSQL) architecture, scaling active users from 2,000 to 4,500+ without downtime.

Work Authorization & Mobility: Holding an Italian EU Long Term Residence Permit, I possess unrestricted legal authorization to work across the European Union and Ireland without visa sponsorship, and I am available immediately. Based in Venice, Italy, I am fully prepared for regular travel to customer sites (10% to 20%) and hybrid collaboration. I communicate with professional C2 fluency in English.

I welcome the opportunity to discuss how my forward deployed mindset, production software experience, and rapid prototyping velocity can contribute to Analog Devices and your strategic clients.

Kind regards,

Prabhavit Gupta
