Atlassian
Hiring Team

Dear Atlassian Hiring Team,

I am writing to express my interest in the Principal Forward Deployed Engineer, AI position (Remote Poland). With a strong background in building and shipping LLM-driven applications, designing complex API integrations, and directly translating customer workflows into automated solutions, I am excited about the opportunity to help Atlassian's enterprise customers maximize the value of Atlassian Intelligence and Rovo.

At FlowSpace, I led the development of our applied AI products and core integrations. My work focuses on solving real-world, messy workflow problems with generative AI. A few key highlights include:

- **Production AI Agents:** Architected and deployed an AI Listing Bot that ingests unstructured brochures (PDFs, websites, images), extracts key data using LLMs (Claude), and pushes structured listings to the backend via a human-in-the-loop review interface.
- **Enterprise Integration:** Engineered robust API connections with industry platforms like OfficeRnD and Nexudus, alongside implementing complex GTM and CRM workflow automations using Next.js and TypeScript.
- **Platform Migration:** Led the technical transition of our live marketplace from a legacy no-code stack to a robust Next.js and Laravel architecture, successfully scaling the platform to support over 4,500 active users.

What draws me to Atlassian is your commitment to unleashing the potential of every team. As a Forward Deployed Engineer, the technical challenge is only half the job; the other half is understanding the customer's domain and navigating enterprise complexity to deliver solutions that actually stick. I thrive at this intersection of applied AI engineering and customer partnership. My experience rapidly prototyping AI tools and migrating critical systems has prepared me to drive immediate impact for your largest clients.

I look forward to hearing from you.

Kind regards,

Prabhavit Gupta
