Hiring Team: BCG X
Boston Consulting Group
Via Ugo Foscolo 1
20121 Milan, Italy
Role: Visiting Forward Deployed AI Engineer (LinkedIn: 4388505837)

Dear BCG X Hiring Team,

I am writing to express my strong interest in the Visiting Forward Deployed AI Engineer position at BCG X in Milan. BCG X operates at the forefront of digital transformation by uniting deep business strategy with cutting-edge software and artificial intelligence. As an engineer specializing in agentic workflows, production LLM systems, enterprise API integrations, and full-stack software delivery, I thrive in delivery-first environments where engineering precision bridges complex client challenges and robust production deployment.

Throughout my engineering work across European technology organizations, I have focused on taking complex client initiatives from initial scoping and prototyping to reliable production systems:

Forward Deployed AI Engineering & Agentic Systems: In production, I combine foundational LLMs (Anthropic Claude, OpenAI) with custom code in TypeScript and Python, architecting multi-step agent orchestration, tool use, and Retrieval-Augmented Generation (RAG). At FlowSpace, I engineered an automated multi-format ingestion pipeline (n8n, Claude API, TypeScript) extracting structured attributes from brochures, PDFs, spreadsheets, and web sources into validated JSON schemas, drafting over 900 production listings. I also authored github.com/prab-gupta/llm-doc-parser, an open-source parsing engine demonstrating schema enforcement and deterministic failure recovery. In my daily development practice, I actively leverage Claude Code to accelerate test scaffolding, system refactoring, and prototype velocity.

Enterprise Integration, Governance & Engineering Rigor: Forward deployed engineering demands both technical rigor and the ability to guide non-technical teams and consultants on AI capabilities and software best practices. At FlowSpace, I deployed customer-facing support AI agents operating against live operational databases, incorporating confidence scoring thresholds and deterministic fallback paths that escalate ambiguous inquiries to human staff. Furthermore, I led the core platform migration off a legacy stack onto a maintainable Next.js and Laravel (PostgreSQL) architecture, scaling active users from 2,000 to over 4,500 without downtime. I built bidirectional REST API and webhook integrations with property management platforms (OfficeRnD, Nexudus) with strict schema validation, audit logging, and automated rate-limit recovery.

Location, Legal Authorization & Cross-Disciplinary Translation: Based in Venice, Italy, I hold an Italian European Long Term Residence Permit, providing full, unrestricted legal authorization to work in Italy and across the European Union without requiring visa sponsorship, and I am available immediately. With direct two-hour high-speed rail connections between Venice and Milan Centrale, I am ideally positioned for regular on-site presence at your Milan office and client workshops, and I am fully open to relocation. I communicate with professional C2 fluency in English and speak conversational Italian. Additionally, my academic background in Philosophy, International Studies and Economics from Ca' Foscari University enables me to translate complex probabilistic AI behaviors into plain, strategic business value for stakeholders.

I would welcome the opportunity to discuss how my practical experience in agentic workflows, API integration, and forward-deployed AI engineering can contribute to BCG X and your client engagements.

Kind regards,

Prabhavit Gupta
