Hiring Team
BairesDev
Remote

Dear Hiring Manager,

I am writing to express my strong interest in the Senior Django Full Stack Engineer (ref# 301699) position at BairesDev. With over 6 years of experience building full-stack applications and a deep proficiency in Python, Django REST Framework (DRF), React.js, and PostgreSQL, I am eager to bring my technical expertise to your global remote team.

In my recent work as a Senior Full Stack Engineer, I have successfully designed and delivered end-to-end features, balancing high-performance backend architectures deployed on AWS with dynamic frontend interfaces built in React.js. More importantly, I have fully embraced AI-augmented workflows, extensively utilizing tools like Claude Code and internal MCP servers to rapidly prototype, debug, and deliver complex features. This allows me to work with a high degree of autonomy and consistently exceed delivery expectations in a fully remote environment.

BairesDev's focus on utilizing cutting-edge AI environments to empower engineers resonates strongly with my own workflow. I thrive when given ownership of the entire stack and am comfortable translating varied business domains into scalable data models and seamless user experiences. My background with containerization, REST API design, and cloud infrastructure ensures that my solutions are not only functional but also highly robust.

I am a strong communicator in English, highly experienced with autonomous remote work, and available to contribute immediately. I would welcome the opportunity to discuss how my hands-on background in Django and React, paired with my proficiency in Claude Code, makes me a great fit for BairesDev.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
