BairesDev Recruitment Team
BairesDev

Dear Hiring Manager,

I am writing to express my strong interest in the Senior Full Stack Developer (Django + React) position at BairesDev. With a deep foundation in designing and operationalizing production-grade distributed systems, coupled with hands-on expertise in React and Python-based backends, I am excited about the opportunity to build scalable end-to-end applications within your AI-augmented development environment.

In my recent work leading full-stack migrations and backend architecture for platforms like FlowSpace.co and Urlink, I have successfully engineered scalable microservices, built complex data integrations using PostgreSQL, and deployed robust, cloud-native applications on AWS. My experience migrating legacy stacks to modern React and Python architectures aligns perfectly with your focus on high-performance Full Stack solutions.

Crucially, I am highly adept at utilizing AI-assisted development tools. I actively incorporate Claude Code and Model Context Protocol (MCP) servers into my workflow to rapidly onboard, automate tasks, and ensure system reliability through rigorous testing and observability. This familiarity with AI tooling allows me to operate highly autonomously and deliver top-tier results with minimal supervision—a key requirement for thriving in a 100% remote environment like BairesDev.

I am drawn to BairesDev's reputation for matching top tech talent with challenging, impactful projects. I am confident that my technical skills, proactive approach to modern cloud infrastructure, and advanced English proficiency will allow me to hit the ground running and make an immediate impact on your client projects.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my background, technical expertise, and passion for AI-driven development can contribute to BairesDev's ongoing success.

Sincerely,
Prabhavit Gupta
