Hiring Team
Bamboo Works
Role: AI Automation Specialist (Claude & Accounting Workflows)

Dear Hiring Team,

I am writing to express my strong interest in the AI Automation Specialist role at Bamboo Works. Designing and operationalizing agentic AI systems that solve messy, real-world business bottlenecks is the core focus of my engineering work. Your mission to build an AI-first bookkeeping and accounting platform powered by Claude agents, intelligent extraction, and human-in-the-loop validation aligns directly with my production experience shipping LLM pipelines and automated integrations.

My approach combines hands-on engineering in Python, TypeScript, and Claude Code with an academic foundation in Economics from Ca' Foscari University of Venice. This intersection allows me to understand transactional mechanics, ledger categorization, and exception workflows from a business perspective while architecting modular multi-agent pipelines to automate them.

Here is how my hands-on background addresses the key objectives of the platform:

Intelligent Document Processing & Data Extraction: At FlowSpace, I engineered an automated multi-format ingestion pipeline using the Claude API, n8n, and TypeScript. The system parses unstructured brochures across PDFs, spreadsheets, websites, and images into strictly typed, validated backend schemas, with over 900 entities processed. To demonstrate this capability publicly, I authored the open-source pipeline llm-doc-parser, implementing schema-enforced extraction and deterministic error recovery for complex business files. I can directly apply this architecture to automate receipt ingestion, invoice line-item extraction, and bank statement parsing.

Human-in-the-Loop Agents & Exception Escalation: In production at FlowSpace, I deployed customer-facing AI agents querying live operational databases. A central requirement was maintaining high precision: I implemented confidence scoring algorithms and automated audit trails, routing ambiguous edge cases to human staff when certainty thresholds fell below benchmark. This pattern maps directly to bookkeeping workflows, allowing AI agents to handle routine transaction coding while surfacing discrepancies or missing documentation to accounting professionals through structured RFI workflows.

System Integrations & Scalable Architecture: I have extensive experience building bidirectional REST API and webhook integrations across distributed platforms, including billing and scheduling systems (OfficeRnD, Nexudus) and CRM pipelines. I am well-versed in the architectural patterns needed to connect modern accounting software (Xero, QuickBooks, Zoho, Odoo) and enterprise backends, ensuring reliable data synchronization and strict access governance. Furthermore, I led the core platform migration of a live marketplace off a legacy stack to Next.js and Laravel (PostgreSQL), scaling to 4,500+ active users with zero downtime.

As an Independent Contractor (Partita IVA) holding an Italian EU Long Term Residence Permit, I am available immediately. I am fully prepared to align with Australian business hours and collaborate closely with leadership to rapidly prototype and evolve these agentic workflows into a commercial accounting platform.

I welcome the opportunity to discuss how my background in Claude agent orchestration and workflow engineering can accelerate your platform roadmap.

Sincerely,

Prabhavit Gupta

I hereby authorize the processing of my personal data contained in this document for the purposes of recruitment and selection in compliance with the General Data Protection Regulation (GDPR) and Italian Legislative Decree 196/2003, as modified by Legislative Decree 101/2018.
