Hiring Manager
CJ OLIVE YOUNG
Seoul, South Korea

Subject: Application for Back-end Developer Position

Dear Hiring Manager,

I am writing to express my strong interest in the Back-end Developer role at CJ OLIVE YOUNG's Core Platform Unit. As a Backend Software Engineer with a proven track record of architecting scalable microservices and operationalizing production-grade distributed systems, I am excited about the opportunity to contribute to the core engine powering your e-commerce and omnichannel business. The challenge of building high-efficiency platforms that handle large-scale traffic across product, member, and inventory domains aligns perfectly with my background in complex data integrations and cloud-native architecture.

While my recent roles have heavily utilized TypeScript, Python, and Node.js for backend orchestration, my strong foundation in object-oriented design and system architecture allows me to adapt quickly to new environments. I am a rapid learner, highly proficient with modern AI tools like Claude Code, which accelerates my ability to onboard into Java, Kotlin, and Spring Framework ecosystems. In my recent work at FlowSpace.co, I led the end-to-end migration of a live platform to a cloud-native architecture, successfully scaling the system to support over 4,500 active users. I also engineered robust API integrations and designed fault-tolerant processing systems to handle unstructured enterprise data—experiences that directly map to the scale and reliability required for CJ OLIVE YOUNG's high-traffic platforms.

Beyond coding, I am deeply focused on data modeling and working with modern data ecosystems (including relational databases and ORMs like Supabase/SQL). I understand that a seamless omnichannel experience relies on the stability and performance of its underlying infrastructure, whether that involves caching with Redis or event-driven architectures akin to Kafka. I thrive in solving complex technical problems and challenging existing paradigms to build more resilient systems.

I am a holder of a European Long Term Residence Permit and am fully open to relocating to Seoul for this opportunity. I would welcome the chance to discuss how my background in building scalable architectures and my drive to master the JVM ecosystem can add immediate value to the Core Platform Unit at CJ OLIVE YOUNG. Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
