Hiring Team: Applied AI & Forward Deployed Engineering
Cloudera
Role: Forward Deployed AI Engineer (LinkedIn: 4445714650)

Dear Cloudera Hiring Team,

I am writing to express my strong interest in the Forward Deployed AI Engineer position within Cloudera's Applied AI organization. Cloudera stands at the vanguard of enterprise data and AI, empowering the world's largest enterprises to run mission-critical analytics and machine learning workloads across hybrid clouds. As generative AI and agentic systems move from executive interest into core operational infrastructure, the central challenge is execution: embedding directly with customers to transform raw data and foundational models into secure, reliable, production-grade applications. With hands-on experience building autonomous agentic pipelines, deploying RAG systems, integrating enterprise APIs, and leading live platform migrations, I am eager to help Cloudera's strategic clients accelerate their AI transformation.

Throughout my engineering engagements across European technology organizations, I have consistently operated as a bridge between technical innovation and customer delivery:

Production AI & Agentic Systems: I build and deploy production AI systems combining foundation models (Claude, OpenAI) with custom code in Python and TypeScript. At FlowSpace, I engineered an automated multi-format ingestion pipeline (n8n, Claude API, TypeScript) extracting structured attributes from heterogeneous brochures, PDFs, spreadsheets, and web sources into validated JSON schemas with human-in-the-loop review, drafting over 900 production listings. I also authored github.com/prab-gupta/llm-doc-parser, an open-source parsing engine demonstrating strict schema enforcement and deterministic error recovery. In my daily workflow, I leverage Claude Code as my primary driver to rapidly prototype architectures, scaffold test coverage, and implement tool-calling workflows via the Model Context Protocol (MCP).

Enterprise Integration, Reliability & Codification: Forward deployed engineering requires uniting architectural rigor with deep customer partnership. At FlowSpace, I deployed customer-facing support AI agents querying live operational databases, incorporating confidence scoring thresholds and deterministic fallback paths that escalate ambiguous inquiries to human specialists. I also led the platform migration off a legacy architecture onto a maintainable Next.js and Laravel (PostgreSQL) stack, scaling active users from 2,000 to over 4,500 without downtime. I implemented bidirectional REST API and webhook integrations with property management systems (OfficeRnD, Nexudus) with schema validation, rate-limit recovery, and audit trails. Across client mandates, I focus on codifying custom solutions into reusable reference patterns, starter kits, and feedback loops that inform core platform engineering.

Work Authorization, Mobility & Commitment: Holding an Italian EU Long Term Residence Permit, I possess full, unrestricted legal authorization to work in Austria and across the European Union without requiring visa sponsorship, and I am available immediately. Based in Venice, Italy, I am fully prepared for regular travel (up to 20%+) for on-site customer engagements, design workshops, and team collaboration. I communicate with professional C2 fluency in English and operate with high autonomy in client-facing environments.

I would welcome the opportunity to discuss how my hands-on agentic engineering toolkit, integration experience, and forward-deployed mindset can contribute to Cloudera and your strategic enterprise clients.

Kind regards,

Prabhavit Gupta
