**Hiring Team**
Cognizant Sweden
Role: DevOps & Automation Engineer
Ref: 4466529325

Dear Hiring Team,

I am writing to express my strong interest in the DevOps & Automation Engineer position at Cognizant Sweden, supporting the GE ADMS Series 6 program within the Energy & Utilities Technology practice. With over three years of hands-on experience designing automated CI/CD pipelines, engineering infrastructure automation, and orchestrating complex platform migrations across European teams, I specialize in building reliable, automated deployment systems that keep mission-critical software stable. Cognizant's work driving technological transformation for modern electrical grids and utility infrastructures represents an exciting opportunity to apply my automation and infrastructure engineering skills to high-impact systems.

Throughout my career across eight European companies, I have focused on automating deployment lifecycles, establishing Infrastructure as Code, and minimizing operational risk. My background aligns closely with the objectives of this role:

**CI/CD Pipelines & Release Automation:** At FlowSpace, I led the infrastructure and platform migration off a legacy architecture onto a containerized Next.js and Laravel (PostgreSQL) stack, scaling active users from 2,000 to over 4,500 without downtime. I designed and maintained automated CI/CD workflows, managing GitHub branching strategies, automated testing gates, and release stages. I work comfortably with Jenkins pipeline design, automated rollbacks, and release governance to ensure predictable delivery.

**Infrastructure as Code & Configuration Management:** I apply modern DevOps principles using Terraform for reproducible cloud infrastructure provisioning across AWS and Azure environments, alongside Docker containerization for uniform development and production workloads. I implement configuration automation and server provisioning using Ansible playbooks, ensuring consistent system state and eliminating manual deployment errors.

**Scripting, Custom Tooling & System Reliability:** Robust automation requires versatile scripting. I write custom automation scripts and operational tools in Python, Bash, and TypeScript, connecting APIs, database routines, and monitoring webhooks. At FlowSpace, I engineered an automated multi-format ingestion pipeline processing 900+ entities with schema-enforced validation and automated exception handling. Furthermore, I integrated automated end-to-end testing with Playwright to validate system health before each deployment.

Holding an Italian EU Long-Term Residence Permit, I possess full legal authorization to work in Sweden and across the European Union without requiring visa sponsorship, and I am available to start immediately. I would welcome the opportunity to discuss how my practical experience in CI/CD pipeline automation, Infrastructure as Code, and Python scripting can contribute to Cognizant and the GE ADMS program.

Kind regards,

Prabhavit Gupta
