October 1, 2026 Dear CoreView AI Operations and Hiring Team,

I am writing to express my enthusiastic interest in the AI Operations Engineer role at CoreView. Having closely followed CoreView's leadership in Microsoft 365 tenant governance and cyber-resilience, I am eager to apply my background in designing, deploying, and governing production AI agents and enterprise automation workflows to accelerate CoreView's internal operations.

As an engineer operating at the convergence of process architecture, AI tooling, and systems integration, I focus on turning complex operational friction into reliable, autonomous or semi-autonomous workflows. Here is how my experience directly aligns with your requirements:

- **AI Agent Design & Deployment:** Architected and iterated on domain-specific AI agents using Python, LangGraph, and enterprise automation platforms, configuring context engineering, tool-calling schemas, evaluation metrics, and human-in-the-loop escalation checkpoints.
- **Systems Integration & Protocols:** Connected agents and automated pipelines to CRMs, ticketing systems, and databases via REST APIs, webhooks, and the Model Context Protocol (MCP), ensuring strict data security and reliable execution.
- **Microsoft Ecosystem Alignment:** Certified in Microsoft Copilot Studio and Microsoft Power Automate, with deep familiarity in building scalable, secure workflow automations that integrate directly with enterprise Microsoft environments.

I hold a European Long-Term Residence Permit with unrestricted authorization to work in Italy and across the EU without sponsorship. Based in Italy (CET), I am available to collaborate seamlessly with your Milan-based and global teams.

I look forward to discussing how my experience with AI agents, MCP integrations, and enterprise automation can deliver immediate value to CoreView. Thank you for your time and consideration.

Kind regards,

Prabhavit Gupta
