Dear Curamando Hiring Team,

As an AI Solutions Engineer with a strong full-stack product background, I am excited to apply for the AI Engineer position at Curamando. Having built scalable, AI-powered applications that serve thousands of users, I am drawn to Curamando's mission of accelerating top-line growth through digital strategy and Eidra's collaborative environment where engineers help shape the AI practice.
At FlowSpace.co, I drove the technical and product evolution of a platform scaling from 2,000 to 4,500+ users. My work bridges the gap between agentic solutions and robust product engineering. Here is how my experience aligns with your needs:

- **Agentic Solutions & AI Integration:** Developed AI agents for customer support and automated data extraction tools, implementing end-to-end ML workflows using RAG and OpenAI integration.
- **Full-Stack Product Engineering:** Led the migration of legacy platforms to Next.JS and Laravel, ensuring AI features are smoothly integrated into the core product UX without compromising scalability.
- **Cross-Functional Collaboration:** Partnered with external agencies and internal teams, defining product logic and automating pipelines using tools like n8n and Playwright.

Curamando stands out not just for the ambition of the problems you tackle, but for the culture of continuous learning and mentorship you foster. I am eager to contribute to the AI Core team's growth, share my expertise in building resilient AI pipelines, and learn from the diverse experts across Eidra.
I would welcome the opportunity to discuss how my blend of full-stack product thinking and AI capabilities can help deliver groundbreaking solutions for your clients.
I look forward to hearing from you.

Kind regards,

Prabhavit Gupta
