Danfoss Hiring Team
Danfoss Climate Solutions
Sofia, Bulgaria

Dear Hiring Team,

I am writing to apply for the Forward Deployed Engineer position at Danfoss Climate Solutions. As an AI Engineer with a strong background in bridging complex business challenges with practical, scalable technical solutions, I am highly drawn to your mission of leveraging digital tools and AI to create measurable value. The opportunity to rethink existing processes and rapidly deploy AI-enabled solutions aligns perfectly with my hands-on experience in automation and enterprise integrations.

In my recent work as a Full-Stack and AI Engineer at FlowSpace.co, I partnered closely with stakeholders to uncover pain points and turn abstract requirements into functional digital tools. I have consistently delivered rapid prototypes that evolved into robust production systems. Specifically, my experience aligns with the needs of your team in the following ways:

- **Rapid AI Prototyping:** Designed and deployed RAG-backed AI agents and multi-step data extraction pipelines using Python and LLMs, enabling non-technical teams to automate complex data workflows safely.
- **Enterprise Integration:** Built secure, human-in-the-loop integrations connecting internal APIs, databases (SQL), and enterprise platforms, always ensuring strict schema validation and reliable error handling.
- **Business-to-Tech Translation:** Acted as the core bridge between stakeholders and the engineering team to rapidly validate ideas, define clear success metrics, and iterate based on real-world outcomes.

Danfoss stands out to me because of its commitment to not just digitizing processes, but fundamentally rethinking them through AI. Your focus on practical, high-impact technical initiatives rather than simply building software at scale is exactly the environment where I thrive. I am excited by the prospect of collaborating with your Engineering, Digital, and Data teams to shape the future of AI enablement across Danfoss Climate Solutions.

I am eager to bring my analytical skills, hands-on experience with modern cloud and data platforms, and proactive problem-solving approach to your team. Thank you for your time and consideration. I look forward to the possibility of discussing this role further.

Kind regards,

Prabhavit Gupta
