Dealls Hiring Team
Dealls

Dear Dealls Hiring Team,

With a proven background architecting highly scalable backend systems and optimizing relational databases, I am excited to apply for the Senior Backend Engineer role at Dealls. The challenge of building a next-generation HRIS platform handling critical transaction-heavy workloads like payroll and attendance aligns perfectly with my focus on system resilience, clean architecture, and data consistency.

At FlowSpace, I led the core platform migration from a legacy system to a robust custom architecture, scaling the platform to support over 4,500 active users. My work involves exactly the kind of transaction management you are looking for:

- **Data Integrity & Optimization:** I designed and optimized complex PostgreSQL database schemas to ensure strict data consistency across concurrent booking and financial transactions.
- **Scalable APIs & Integration:** I built clean, extensible RESTful APIs to sync data seamlessly with third-party platforms (such as OfficeRnD and Nexudus) and support a decoupled frontend.
- **Event-Driven Resilience:** I implemented automated, event-driven pipelines for CRM routing and data ingestion that drastically reduced latency and manual support overhead.

I understand the critical nature of HR, payroll, and attendance systems where eventual consistency and transaction integrity are not just buzzwords, but essential requirements for a reliable client experience. I thrive in lean, high-ownership cultures where I can take end-to-end responsibility for solving real-world problems.

I would love to discuss how my backend engineering experience can help Dealls build a seamless, massively impactful HRIS platform. I look forward to hearing from you.

Kind regards,

Prabhavit Gupta
