October 1, 2026 Dear Dialectic Hiring Team,

As an AI-native engineer who thrives at the intersection of technical execution and operational strategy, I was excited to see Dialectic's opening for a Forward Deployed Engineer. I spent the last three years embedding with European startups. My job was to translate unwritten requirements into production-ready infrastructure. I specialize in the rapid, cross-domain problem-solving this role demands.

As Lead Developer at FlowSpace.co, I drove the technical iterations that scaled our platform from 2,000 to over 4,500 users. My work bridges the gap between field requirements and core product through hands-on development:

- **AI Integration & Automation:** Shipped production AI agents and internal tools using TypeScript, Python, and n8n. These tools directly accelerated business processes like lead enrichment and data parsing.
- **Full-Stack Prototyping:** Led the end-to-end architectural migration of a live platform to a Next.js stack. I heavily leveraged AI copilots to drastically reduce development time.
- **Cross-Functional Execution:** Acted as the technical mediator between founders, external agencies, and clients. I ensured our architectural decisions directly solved operational bottlenecks on the ground.

Dialectic's focus on leveraging modern AI coding agents to push the boundaries of the crypto-asset stack aligns perfectly with my workflow. I am highly comfortable dropping into new codebases, understanding the operational reality, and writing the TypeScript or Python necessary to streamline your internal tooling and systems integrations.

I would welcome the opportunity to discuss how my background in fast-paced, forward-deployed technical roles can help accelerate Dialectic's engineering efforts. I look forward to hearing from you.

Kind regards,

Prabhavit Gupta
