Hiring Team
Doctolib
Via Pisani 19, Milan, Italy

Subject: Application for Software Engineer - Java (x/f/m)

Dear Hiring Manager,

I am writing to express my strong interest in the Software Engineer - Java position at Doctolib, focusing on the Vettore Medical team in Milan. Doctolib's mission to transform healthcare and improve the daily lives of care teams aligns perfectly with my drive to build reliable, high-impact products.

As a Backend Engineer with over 3 years of experience architecting and operating resilient microservices and APIs, I have a deep understanding of cloud SaaS solutions. At FlowSpace.co, I led the platform migration off a legacy stack to a robust and scalable architecture, supporting a growing user base from 2,000 to over 4,500. This required rigorous schema validation, uptime monitoring, and reliable transactional consistency—qualities essential when building solutions for medical offices and clinics where data integrity is paramount.

My technical background is firmly rooted in building complex backend solutions and data pipelines. While my recent professional roles have heavily utilized TypeScript, Node.js, Next.js, and Python, I am highly proficient in object-oriented programming concepts and have a strong foundation capable of adapting to Java, Kotlin, and C#. Furthermore, my hands-on experience with frontend technologies like JavaScript, HTML, and CSS positions me well to collaborate effectively across the stack.

I strongly advocate for test-driven development (TDD) and pragmatically engineered code. I frequently leverage AI-powered tools and advanced LLMs to rapidly generate tests, optimize code delivery, and ensure system reliability, which would allow me to quickly ramp up and contribute to Doctolib's ecosystem.

I am particularly drawn to Doctolib's agile environment and the opportunity to work closely with cross-functional teams in Milan. Operating hybrid from Venice/Milan is an ideal setup for me. I welcome the opportunity to discuss how my background in scalable architectures, commitment to code quality, and fast learning capabilities make me a strong fit for the Vettore Medical team.

Thank you for considering my application. I look forward to the possibility of discussing this role with you.

Sincerely,

Prabhavit Gupta
