Hiring Team & Founders
Dots
Role: Forward Deploy Engineer
Ref: LinkedIn 4373644148

Dear Dots Hiring Team,

I am writing to express my strong interest in the Forward Deploy Engineer position at Dots. Dots is transforming how executive search and recruitment teams operate by replacing fragmented legacy tools with an intelligent, unified platform. As Dots accelerates customer onboarding, the primary technical bottleneck for new clients is migrating complex, dirty data out of legacy ATS and CRM databases without downtime or loss of fidelity. With hands-on experience leading large-scale data migrations, writing production ETL scripts in TypeScript and SQL, building AI-accelerated ingestion pipelines, and working directly with stakeholders, I am excited to help Dots onboard customers rapidly and reliably.

At the intersection of customer-facing consulting and hands-on software development, a Forward Deploy Engineer must combine rigorous data precision with rapid product execution. Having operated across European technology environments and fast-paced marketplace platforms, I understand that migrating customer data is not just about moving records: it requires untangling bespoke schemas, automating edge-case handling, and translating customer feedback directly into core product improvements.

My background aligns directly with the core requirements of the Forward Deploy Engineer role:

- **End-to-End Data Migrations and Schema Mapping:** I possess deep hands-on experience auditing legacy data structures and executing zero-downtime cutovers. As Lead Developer at FlowSpace, I spearheaded the complete data and platform migration off a legacy architecture to PostgreSQL, Next.js, and Laravel. I mapped complex entity relationships, authored custom extraction and transformation routines in TypeScript and SQL, resolved relational discrepancies, and scaled the platform from 2,000 to 4,500+ users without data loss.
- **AI-Accelerated Tooling and Automation:** I build custom tools that turn messy, unstructured customer data into strictly validated schemas. At FlowSpace, I architected an automated ingestion pipeline (TypeScript, Claude API, n8n) that processes unstructured brochures across PDFs, spreadsheets, and web pages into validated database records, incorporating human-in-the-loop review (900+ listings drafted). I maintain an open-source tool, LLM Document Parser (github.com/prab-gupta/llm-doc-parser), and utilize Claude Code daily as my primary driver to rapidly prototype migration scripts, inspect schemas, and build resilient API integrations.
- **Customer-Facing Solutions and Feedback Loops:** At FlowSpace and Urlink, I worked directly with clients and founders to scope technical requirements, triage live integration challenges, and implement bespoke features via REST APIs and webhooks (including OfficeRnD, Nexudus, and CRM systems). I bridge customer communication with engineering execution, ensuring that recurring migration bottlenecks and field insights are fed back into core product features and automated tooling.

Holding an Italian EU Long Term Residence Permit, I possess unrestricted authorization to work across the EU without visa sponsorship, and I am available to start immediately as an employee or remote contractor (Partita IVA). I communicate fluently in English (C2 professional proficiency) and thrive in high-velocity startup environments where engineering rigor meets customer impact.

I would welcome the opportunity to discuss how my data migration expertise, TypeScript and SQL toolkit, and forward-deployed mindset can accelerate customer onboarding at Dots.

Kind regards,

Prabhavit Gupta
