Dear ElevenLabs Hiring Team,

I am writing to apply for the Forward Deployed Engineer role in Italy. Your mission to define the trajectory of AI audio deeply resonates with my focus on building production-ready AI pipelines. Working as a forward deployed engineer, I have seen firsthand how critical it is to embed with strategic partners, translating their ambiguous business challenges into robust technical architectures.

In my recent role at FlowSpace, I took end-to-end ownership of deploying AI solutions for complex client needs. Leveraging Python and API integrations, I built workflows that directly solved operational bottlenecks. Key highlights of my approach include:

- **Customer-Embedded Execution:** Partnered directly with client stakeholders to architect and deliver an AI listing pipeline, bridging domain requirements with full-stack execution.
- **Agentic Automation:** Orchestrated multi-step LLM agents with custom tool use (often accelerated by AI assistants like Claude Code) to ingest diverse formats and ensure reliable, validated outputs.
- **Scalable Architecture:** Drove the full-stack migration of a legacy platform to a modern architecture, resolving integration complexities across third-party APIs and internal CRMs.

I admire ElevenLabs' commitment to rapid experimentation and high-velocity delivery. You need an engineer who can own high-stakes projects and communicate effectively with executives and technical teams alike. While my professional English is native-level and I operate daily from Venice, I want to be transparent that my Italian is currently at a beginner level. I am actively working to improve it and am confident that my technical execution and deep experience in navigating cultural nuances will enable me to drive immediate impact with your regional partners.

I thrive in lean, autonomous teams where impact matters more than job titles. I would welcome the opportunity to bring my problem-solving skills to ElevenLabs and help your strategic customers push the limits of what is possible with AI audio.

I look forward to hearing from you.

Kind regards,

Prabhavit Gupta
