Hiring Team, Generative AI Engineering
FinecoBank S.p.A.
Piazza Durante, 11
20131 Milano (MI), Italy
Role: Lead AI Engineer, Generative AI (Req: 4450343817)

Dear Hiring Team at FinecoBank,

I am writing to express my strong interest in the Lead AI Engineer, Generative AI position at FinecoBank in Milan. Fineco has established itself as one of Europe's premier digital banks by coupling financial excellence with relentless technological innovation. Bringing Generative AI and multi-agent systems into banking requires more than experimenting with models; it demands disciplined system architecture, strict SLO governance across latency, cost, and hallucination risk, and seamless integration with core banking systems. Over the past three years, I have specialized in architecting and deploying production-grade AI agents, LLM ingestion pipelines, and resilient backend platforms.

At FlowSpace, I owned product and AI systems end to end, scaling the platform from 2,000 to over 4,500 active users. To eliminate manual data entry, I architected an autonomous multi-agent listing pipeline using TypeScript, Claude, and n8n that ingests unstructured documents in any format (complex PDFs, web listings, spreadsheets), orchestrates tool calls, and extracts validated structured JSON schemas with human-in-the-loop verification, successfully processing over 900 listings. I also deployed conversational support agents operating over live transactional data, enforcing confidence-scoring thresholds and deterministic fallback paths to human operators when uncertainty arises. In parallel, I led the platform migration off a legacy stack onto a maintainable Next.js and Laravel architecture, designing robust REST APIs and webhook integrations with third-party enterprise platforms (OfficeRnD, Nexudus) with continuous uptime.

My technical approach bridges cutting-edge LLM capabilities with rigorous engineering standards:

- **Generative AI & Multi-Agent Orchestration:** Designing resilient agentic architectures (tool calling, stateful memory, retrieval-augmented generation) with explicit guardrails, evaluation benchmarks, and failure-recovery mechanisms.
- **Production MLOps & APIs:** Building scalable pipelines in Python and TypeScript, optimizing inference latency and token budgets, implementing OpenAPI contracts, and maintaining structured logging and observability.
- **Cross-Functional Leadership:** Translating ambiguous business goals into clear technical roadmaps, conducting code reviews, mentoring colleagues, and collaborating with product, security, and compliance stakeholders.

I hold a degree in Philosophy, International Studies & Economics from Ca' Foscari University of Venice, combining analytical logic and economic rigor with deep technical execution. I hold an Italian European Long Term Residence Permit (granting full legal work authorization across Italy with no visa sponsorship required), speak fluent English (C2) alongside conversational Italian, and am based in Venice with full availability for hybrid work at your Milan headquarters.

I welcome the opportunity to discuss how my hands-on background in agentic AI architecture, platform engineering, and technical leadership can help FinecoBank deliver secure, high-impact Generative AI solutions.

Sincerely,

Prabhavit Gupta
