Hiring Manager
FullStack
Remote, USA

Dear Hiring Manager,

I am writing to express my strong interest in the Forward Deployed AI Engineer (Python) position at FullStack. With my background in developing custom Python solutions, integrating complex AI pipelines into customer infrastructures, and bridging the gap between product engineering and customer success, I am drawn to FullStack's approach to delivering high-impact solutions directly to clients.

My technical stack closely aligns with the requirements of this FDE role. I have extensive experience building scalable solutions using Python, TypeScript, and SQL, and integrating REST and GraphQL APIs. My recent work has increasingly focused on deploying multi-step LLM agents and AI orchestration frameworks on cloud platforms like AWS and GCP. By embedding directly with customer teams, I translate ambiguous business requirements into robust, working software, architecting integrations that work securely alongside legacy enterprise environments.

Beyond coding, I understand that a successful Forward Deployed Engineer must operate seamlessly in client environments. I excel at context-switching between deep technical execution and strategic business conversations, ensuring that customer teams are well-trained and that critical product insights are effectively fed back to the core engineering organization. Whether implementing secure RAG pipelines or optimizing production API connections, my goal is always rapid time-to-value for the customer.

I am highly adaptable, comfortable working remotely across time zones, and thrive in elite engineering environments where shipping custom solutions rapidly is the standard. I look forward to the opportunity to bring my blend of technical depth in Python AI engineering and client-facing skills to FullStack.

Thank you for considering my application. I welcome the opportunity to discuss how I can contribute to your team.

Sincerely,
Prabhavit Gupta
