Hiring Manager
FDE Pulse

Subject: Application for Fullstack Forward Deployed AI Engineer (TypeScript)

Dear Hiring Manager,

I am writing to express my strong interest in the Fullstack Forward Deployed AI Engineer position featured on FDE Pulse. With my robust background in TypeScript, Python, and modern AI orchestration frameworks, I am excited about the opportunity to build custom AI solutions and integrate them seamlessly into customer infrastructures.

In my current freelance work, I have operated at the intersection of product engineering and client delivery, regularly architecting REST and GraphQL APIs on cloud platforms such as AWS and GCP. My core strength lies in writing production-ready TypeScript and Python code to deploy LLM capabilities that directly solve complex business challenges for enterprise clients. I thrive in customer-facing environments where translating business requirements into scalable software in a matter of days is critical.

I am highly adaptable, capable of quickly context-switching between deep technical implementation and high-level client strategy. I have extensively used tools like Claude Code to accelerate development cycles and ensure that integrations are robust and scalable. The FDE model resonates with my passion for taking cutting-edge AI products and making them work flawlessly in the real world for end users.

Thank you for considering my application. I look forward to the possibility of discussing how my technical expertise and client-facing experience can contribute to your elite engineering team.

Sincerely,

Prabhavit Gupta
