Hiring Manager
Google Cloud
Zurich, Switzerland

Dear Hiring Manager,

I am writing to express my strong interest in the Forward Deployed Engineer, Applied AI position at Google Cloud in Zurich. The opportunity to embed directly with customers, translate complex business requirements into working software, and architect custom AI integrations aligns perfectly with the hands-on, client-facing engineering I do every day. Over the past three years, I have specialized in building robust API platforms, orchestrating LLM APIs, and bridging the gap between core product engineering and successful customer outcomes.

At FlowSpace, I engineered production-ready AI pipelines and API integrations using Python, TypeScript, and Claude. I architected an automated multi-format ingestion pipeline that extracts structured data from PDFs, client spreadsheets, and web sources, effectively shipping custom automation that generated over 900 verified listings. I also deployed support agents that operate directly over live platform data with deterministic fallback paths, and architected API integrations with third-party software (OfficeRnD, Nexudus) to synchronize customer operational systems. This work required strict discipline with REST API standards, SQL data integrity, and direct communication to translate business logic into scalable technical solutions.

In parallel freelance engagements as a Project Manager and AI Developer for clients like Urlink and Get2Germany, I regularly engage in the rapid context-switching required of Forward Deployed Engineers: moving from high-level business discovery to writing production TypeScript or integrating Google APIs and LLM orchestration frameworks. My daily engineering workflow relies on AI-assisted development tools like Claude Code, allowing me to ship custom solutions and architect resilient integrations in days rather than quarters, while actively feeding actionable insights back into core product development.

I hold an Italian European Long-Term Residence Permit (granting full EU work authorization), communicate fluently in English, and am highly enthusiastic about relocating to Zurich to join the Google Cloud team. I would welcome the opportunity to discuss how my hands-on background in API architecture, Applied AI orchestration, and direct client engineering can help Google Cloud customers achieve their technical goals.

Sincerely,

Prabhavit Gupta
