**Grafton Recruitment**
Hiring Team

Dear Hiring Manager,

I am writing to express my interest in the Forward Deployed Engineer position for your AI Platform. With a strong background in building and shipping LLM-driven applications, designing complex API integrations, and translating open-ended customer workflows into reliable, automated AI agents, I am excited about the opportunity to help enterprise customers become AI-driven organizations. As I am based in Italy, I am fully available for the smart working arrangement in Rome or Milan.

At FlowSpace, I led the development of our applied AI products and core integrations, taking ownership of ambiguous problems and collaborating directly with stakeholders to ensure business impact. A few key highlights include:

- **Production AI Agents:** Architected and deployed an AI Listing Bot that integrates with unstructured data sources (PDFs, websites), extracts key data using Claude, and performs real tasks by pushing structured listings to the backend via a human-in-the-loop review interface.
- **System Integration & Data Flows:** Engineered robust API connections with external systems like OfficeRnD and Nexudus, and implemented complex CRM workflow automations using Next.js and TypeScript, handling end-to-end deployment and continuous iteration.
- **Technical Problem-Solving:** Translated complex operational challenges into scalable system designs, leading the technical migration of a live marketplace to a Next.js and Laravel architecture that successfully scales to support over 4,500 active users.

What draws me to Grafton Recruitment is the opportunity to operate at the intersection of AI innovation and enterprise delivery. I understand that the technical challenge is only half the job; the other half is understanding the customer's specific success criteria and iterating based on real-world results. My experience rapidly prototyping conversational systems and operating production AI tools has prepared me to drive immediate, measurable outcomes for your clients.

I look forward to discussing how my background in software design and AI automation can contribute to the Technology & Innovation team at Grafton Recruitment.

Kind regards,

Prabhavit Gupta
