October 1, 2026 Dear If Insurance Hiring Team and AIKA Squad,

When I came across the AI Agent Developer role within the AIKA Squad, I immediately recognized the exact domain where I focus my work: scaling autonomous Agentic AI and building reliable, production-grade workflow automations using n8n and modern LLM orchestration. Combining AI engineering with workflow automation is what I do daily, and I am excited by If Insurance's mission to embed intelligent agents across Nordic and Baltic operations.

At FlowSpace.co and across my European automation projects, I have specialized in turning business processes into dependable, automated systems. Here is how my background directly addresses your requirements:

- **n8n Workflow Automation:** Deep hands-on experience designing end-to-end automation pipelines in n8n, connecting diverse SaaS platforms, databases, and LLM APIs to eliminate manual overhead.
- **Agentic AI & Tool Orchestration:** Built multi-agent architectures utilizing tool use, structured function calling, and MCP-based integrations to connect models with enterprise systems and data sources.
- **Production Engineering & Integrations:** Integrated deterministic automations (REST/SOAP APIs, RPA workflows) with generative AI decision points, ensuring rigorous error handling, logging, and evaluation.

Your focus on pragmatic, value-driven AI development—balancing experimentation with engineering discipline, security, and operational reliability—matches my own development approach. I hold a European Long-Term Residence Permit (no sponsorship required) and am fully prepared to relocate or work in a hybrid capacity across your Nordic offices (Turku, Espoo, Stockholm, or Copenhagen).

I would welcome the opportunity to discuss how my hands-on experience with n8n and Agentic AI architectures can help advance the AIKA Agent platform. Thank you for your time and consideration.

Kind regards,

Prabhavit Gupta
