Hiring Team: Client Success & Support
Intapp Portugal
Role: Client Support Engineer
Ref: LinkedIn 4457159572 (Lisbon, Portugal)

Dear Hiring Team,

I am writing to express my strong interest in the Client Support Engineer position at Intapp in Lisbon. Intapp's industry-specific cloud platform, particularly Intapp Time, serves as the operational backbone for the world's premier legal, accounting, and capital markets firms. With over 3 years of hands-on technical experience troubleshooting complex web applications, performing SQL diagnostics, resolving API integration failures, and managing client-facing incident lifecycles across European technology environments, I bring the technical depth and client empathy required to deliver exceptional support to Intapp's enterprise clients.

In professional and financial services, platform reliability and data consistency are paramount. Intapp's software connects automated time capture, compliance, and billing directly into enterprise practice management and financial systems. Having operated at the intersection of application debugging, database investigation, and customer communication, I understand that resolving an enterprise ticket requires more than finding a temporary workaround: it demands isolating the root cause, verifying data integrity, and communicating transparently to preserve client trust.

My technical background maps directly to the core responsibilities of the Client Support Engineer role:

SQL Diagnostics and Database Troubleshooting: I possess strong practical experience querying and analyzing relational databases (PostgreSQL, MySQL, Supabase) to trace data anomalies, verify schema consistency, and audit transactional records. As Lead Developer at FlowSpace, I spearheaded the complete data and platform migration off a legacy architecture to PostgreSQL and Laravel, writing custom data-mapping routines and resolving complex relational conflicts without platform downtime across 4,500+ active users.

API and Enterprise Integration Troubleshooting: I have extensive hands-on experience diagnosing REST APIs, webhooks, and JSON/XML payloads. I engineered and maintained multi-system synchronizations connecting external enterprise platforms (such as OfficeRnD, Nexudus, SendGrid, and CRM systems), actively debugging payload parsing issues, rate limiting bottlenecks, and authentication drops using Postman, browser developer tools, and HTTP network traces.

Client-Facing Triage and Engineering Escalation: At FlowSpace, I owned technical issue resolution end-to-end for live marketplace operations. I diagnosed client-reported issues across web, backend, and integrated services, communicating technical updates clearly to stakeholders and end users. When encountering core system defects, I authored structured escalation packets containing reproducible steps, server logs, API traces, and database snapshots, enabling product engineering teams to deliver swift code patches. Furthermore, I built and deployed automated support workflows that resolved routine queries against live data and routed complex edge cases to human specialists with complete diagnostic context.

Holding an Italian EU Long Term Residence Permit, I possess unrestricted authorization to work in Portugal and throughout the EU without visa sponsorship, and I am available to start immediately in Lisbon. I communicate fluently in English (C2 professional proficiency) and thrive in collaborative, fast-paced technical environments.

I would welcome the opportunity to discuss how my troubleshooting methodology, SQL diagnostics skills, and client-first approach can add immediate value to Intapp's Client Success and Support team.

Kind regards,

Prabhavit Gupta
