**Hiring Manager**
Humaans
London, England, UK

Dear Hiring Manager,

I am writing to express my strong interest in the Forward Deployed Engineer position at Humaans, as advertised for the Jack & Jill team. With my robust background in building scalable web applications, REST/GraphQL APIs, and custom software solutions, I am excited about the opportunity to bridge the gap between your product engineering and customer success teams. My experience aligns perfectly with the core mission of an FDE: translating complex business requirements into working, production-ready software.

In my recent work as a Senior Freelance Developer, I have consistently embedded myself with diverse client teams to architect and integrate custom solutions into their existing infrastructure. I am highly proficient in the typical FDE stack, including Python, TypeScript, and SQL, and have extensive experience deploying applications on cloud platforms like AWS and Azure. Moreover, I regularly utilize AI orchestration frameworks and tools like Claude Code to accelerate development and deliver high-impact results in days rather than quarters.

I thrive in environments that require rapid context-switching between technical deep dives and business-level conversations. I enjoy the challenge of troubleshooting client issues, training customer teams, and feeding crucial product insights back to the core engineering organization. I am confident that my blend of strong technical skills and client-facing communication will allow me to make an immediate impact at Humaans.

Thank you for considering my application. I would welcome the opportunity to discuss how my background, skills, and drive make me a great fit for the Forward Deployed Engineering team.

Sincerely,

Prabhavit Gupta
